

Website Project Proposal: Skull Bracelets

Student Name: Netefatso Kekeco Maine

Student Number: ST10479886

Project: Skull Bracelets Website

1. Organisation Overview

Name: Skull Bracelets

Skull Bracelets is a small South African accessory business that sells unique skull-themed bracelets. The organisation is aimed at customers who enjoy alternative fashion, bold accessories and products that allow them to express their individual style. The business will offer different bracelet designs, including classic, black, beaded and premium skull bracelets.

Mission and Vision

The mission of Skull Bracelets is to provide affordable and stylish bracelets that allow customers to express their personality. The vision is to develop the organisation into a recognised accessory brand known for creative designs, quality products and good customer service.

Target Audience

The target audience includes teenagers, young adults and customers interested in alternative fashion, jewellery and unique accessories.

2. Website Goals and Objectives

The main goal of the website is to create an online presence for Skull Bracelets and make it easier for customers to view the available products.

The objectives are to display the bracelet collection, provide product information and prices, allow customers to view product images and provide contact information. The website will also help improve the organisation's credibility and make its products easier to discover online. Laudon and Laudon (2023) explain that digital platforms can improve communication between organisations and their stakeholders.

The website's performance can be measured through website visitors, product enquiries and customer contact form submissions.

3. Current Website Analysis

The organisation does not currently have a developed online platform. Customers would therefore have limited access to information about the products, prices and available designs.

A dedicated website can improve this situation by providing customers with a central place where they can view products and contact the organisation. Nielsen (2020) explains that websites should be easy to navigate and allow users to find information efficiently.

4. Proposed Website Features and Functionality

The proposed website will include a Home Page, Bracelets Page, Gallery Page, About Us Page and Contact Page.

The Home page will introduce the organisation, while the Bracelets page will display available products and prices. The Gallery will provide images of the bracelet designs. The About Us page will explain the organisation's mission, vision and values. The Contact page will provide contact information and a customer enquiry form.

The website will use clear navigation links so users can easily move between pages.

5. Design and User Experience

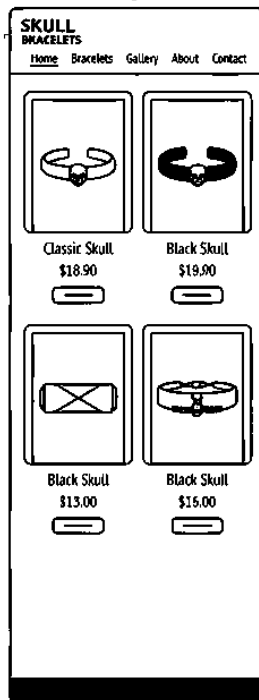

The website will use a dark colour scheme consisting mainly of black, dark grey, white and red. The dark theme is intended to match the skull-inspired branding and create a bold appearance.

Arial will be used as a simple and readable font. Product information will be displayed using card-based sections, while the Gallery will use a structured image layout. Nielsen (2020) states that consistent layouts and simple navigation can improve website usability.

6. Technical Requirements

The website will initially be developed using **HTML5 and CSS3** in Visual Studio Code. JavaScript will not be included in the first development stage.

HTML will provide the structure of the pages, while CSS will control colours, spacing, navigation, product cards, gallery layouts and forms. According to MDN Web Docs (2025), HTML is used to structure web content while CSS is used to control its presentation.

7. Timeline and Milestones

Week 1: Research, planning and website proposal.

Week 2: HTML page development and navigation.

Week 3: CSS styling and product/gallery design.

Week 4: Testing, debugging and improvements.

Week 5: Final review and submission.

8. Budget

Item	Estimated Cost
Domain registration	R150–R300 per year
Web hosting	R500–R1,500 per year
Website development	Student-developed
Basic maintenance	R200–R500 per month

The initial cost will therefore mainly depend on the selected domain and hosting provider.
